DSH HACKS V2 · AI × HEALTHCARE · JUDGES' QUICK START

Try HemoLink AI in 2 minutes

(link added after deploy)

Works on a laptop or phone.
The first visit can take ~1 minute to wake the server.

Demo accounts — one click on the sign-in page

ROLE	EMAIL	PASSWORD	WHO IT IS
Donor	`donor@demo.com`	`Demo123!`	Amira, a regular donor in Cyberjaya
Drive organizer	`organizer@demo.com`	`Demo123!`	Daniel, who runs campus and community drives
Blood bank admin	`admin@demo.com`	`Demo123!`	Dr. Sara Tan at a blood bank centre

Or just tap **Donor**, **Organizer** or **Admin** under "Role selection" on the sign-in page. Tip: open the admin in one window and the donor in a private window to watch an alert arrive.

Three short tours

1 · Blood bank

The AI shortage outlook and donor matching

1. The dashboard warns **O− is already below the safe level**, and says why.
2. Click **Mobilise O− donors** → **Find matching donors**. Each donor gets a score with the reasons behind it.
3. **Send alerts** → **Simulate donor replies (demo)** → **Mark donated**. Stock goes up.
4. **AI Models**: forecast accuracy, the fairness check and the PDN rules.

2 · Donor

Find, check, book, and understand your blood test

1. **Find Campaigns** → **Use my location**: map, distances, **Book a slot**.
2. **Eligibility Check**: 15 questions; the rules decide and the AI explains the result.
3. **HemoScan AI** → open a past report, or try a *fictional sample* PDF.
4. **Notifications** → answer an urgent request with **I can come**.

3 · Drive organizer

Plan drives where the blood is needed

1. **Insights & Planner**: where and when to hold the next drive, and regular donors to invite back.
2. **Create this campaign**, then drop a pin on the map (or *Find venue on map*).
3. **Bookings & Check-in**: mark donors as donated or no-show.

Also worth a look

EN | BM in the top bar switches the whole app to Bahasa Malaysia, including dates and alerts.

On a phone, use the bottom tab bar, or add HemoLink to the home screen as an app.

My Profile has alert settings (email / SMS / push) and the PDPA tools: download or delete my data.

Privacy by design: sign in as admin or organizer and try to find a donor's HemoScan report. You can't.

Where to see each judging criterion

CRITERION	WHERE TO LOOK
Technical depth	Admin → **AI Models**: 70 forecast series trained on MOH data, each picking the best of 3 methods by rolling cross-validation; return model AUC 0.85; 54 automated tests
Clinical insight	Eligibility rules from Pusat Darah Negara's donor form (sources on the page); HemoScan flags patterns but never diagnoses; HemoCare medicine waiting periods
Real-world impact	Shortage warnings days early; alerts sent only to the donors most likely to come; fewer donors turned away on the day
Feasibility	Runs on a free server and on phones; works without an AI key (built-in templates); PDPA consent, data export and deletion
Creativity	One loop joining donors, organizers and blood banks; a fairness check on who gets alerted; English and Bahasa Malaysia

Student prototype — not a medical device. Blood stock, centres and the 300 background donors are simulated; donation trends use real Ministry of Health Malaysia data (CC BY 4.0). Please don't enter real health information. The demo data resets when the server restarts. Code: github.com/chanjyi/hemolink-ai (AGPL-3.0).
